DETAILED ACTION

Applicant remarks that the patentable distinct species relates to the element of claim 12 and traversed the restriction requirement. Applicant also points out that landscape pin magazine is merely an additional element of the elected species. Applicant, note that the pin magazine in embodiment of Fig. 2, is a different feature. The embodiments of Figs.1 and 3-8 have no pin magazine as shown in Fig. 2. Therefore the restriction requirement of the embodiments is proper.

Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show “a cupped edge hammer” as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified

Art Unit: 3721

and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities: In the specification, on page 4, on lines 6 and 7 #24 and #34 identify adapter plate.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 9 and 13-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Jacobsen et al. (US 4,706,864).

Jacobsen et al. discloses a tool comprising: a frame (21) sized to housed a landscape pin; a base (22) attached to the frame and having a slot (77 recess) formed in the base; a hammer (79) disposed within the frame and aligned with the slot; driving means (65) including a foot lever (foot pedal) for applying force to the hammer to drive the pin. Jacobsen et al. further shows base thickness similar to pin thickness (figs. 2, 11). Jacobsen et al. also discloses stop means (70) and hammer including stop means (bottom edge of 68); a return spring (73).

Moreover Jacobsen et al. shows method for driving a landscape pin as in the figures 11 and 17.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

^{10 is}
Claim ~~1~~ rejected under 35 U.S.C. 103(a) as being unpatentable over Jacobsen et al. in view of Richardson (US 1,106,241).

Jacobsen et al. lacks a hammer with a cupped edge. However, Richardson discloses a cupped edge (15' cavity) hammer (13). In view of the teachings of Richardson, It would have been obvious to one skilled in the art to provide the hammer edge of Jacobsen with a cupped edge in order to conform with the edge of pin and minimize slipping.

Allowable Subject Matter

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Refer to attachment for notice of references cited and recommended for consideration based on their disclosure of limitations of the claimed invention.
